

# Lesson Condensing Prompt Framework

---

*For when the schedule changes and the lesson has to shrink.*

## The Prompt

Act as an instructional coach specializing in pacing and time management. I'm attaching a [original length]-minute lesson plan. Condense it into a [new length]-minute version due to [reason — weather delay, modified schedule, shortened period]. The following are non-negotiable and must stay intact: the core learning objective, the exit ticket or formative check, and direct instruction on [key concept]. Find time savings by trimming transitions, shortening independent practice, and converting group discussion into a quick think-pair-share where it makes sense. Output the revised plan in the same format as the original, with a revised timestamp next to each segment.  
*[Attach or paste your lesson plan below this line]*

## What Goes in the Brackets

- [original length] / [new length] — how much time you actually have now
- [reason] — why the schedule changed. Doesn't affect the output, but keeps your prompt clear if you're reusing it later
- [key concept] — the one thing that has to get taught, no matter what else gets cut

## Before You Use It

- ☐ The objective, exit ticket, and key concept all made it into the revised plan
- ☐ The timing actually adds up to your new total, transitions included
- ☐ No leftover brackets or placeholder text in the output
