

Types of AI

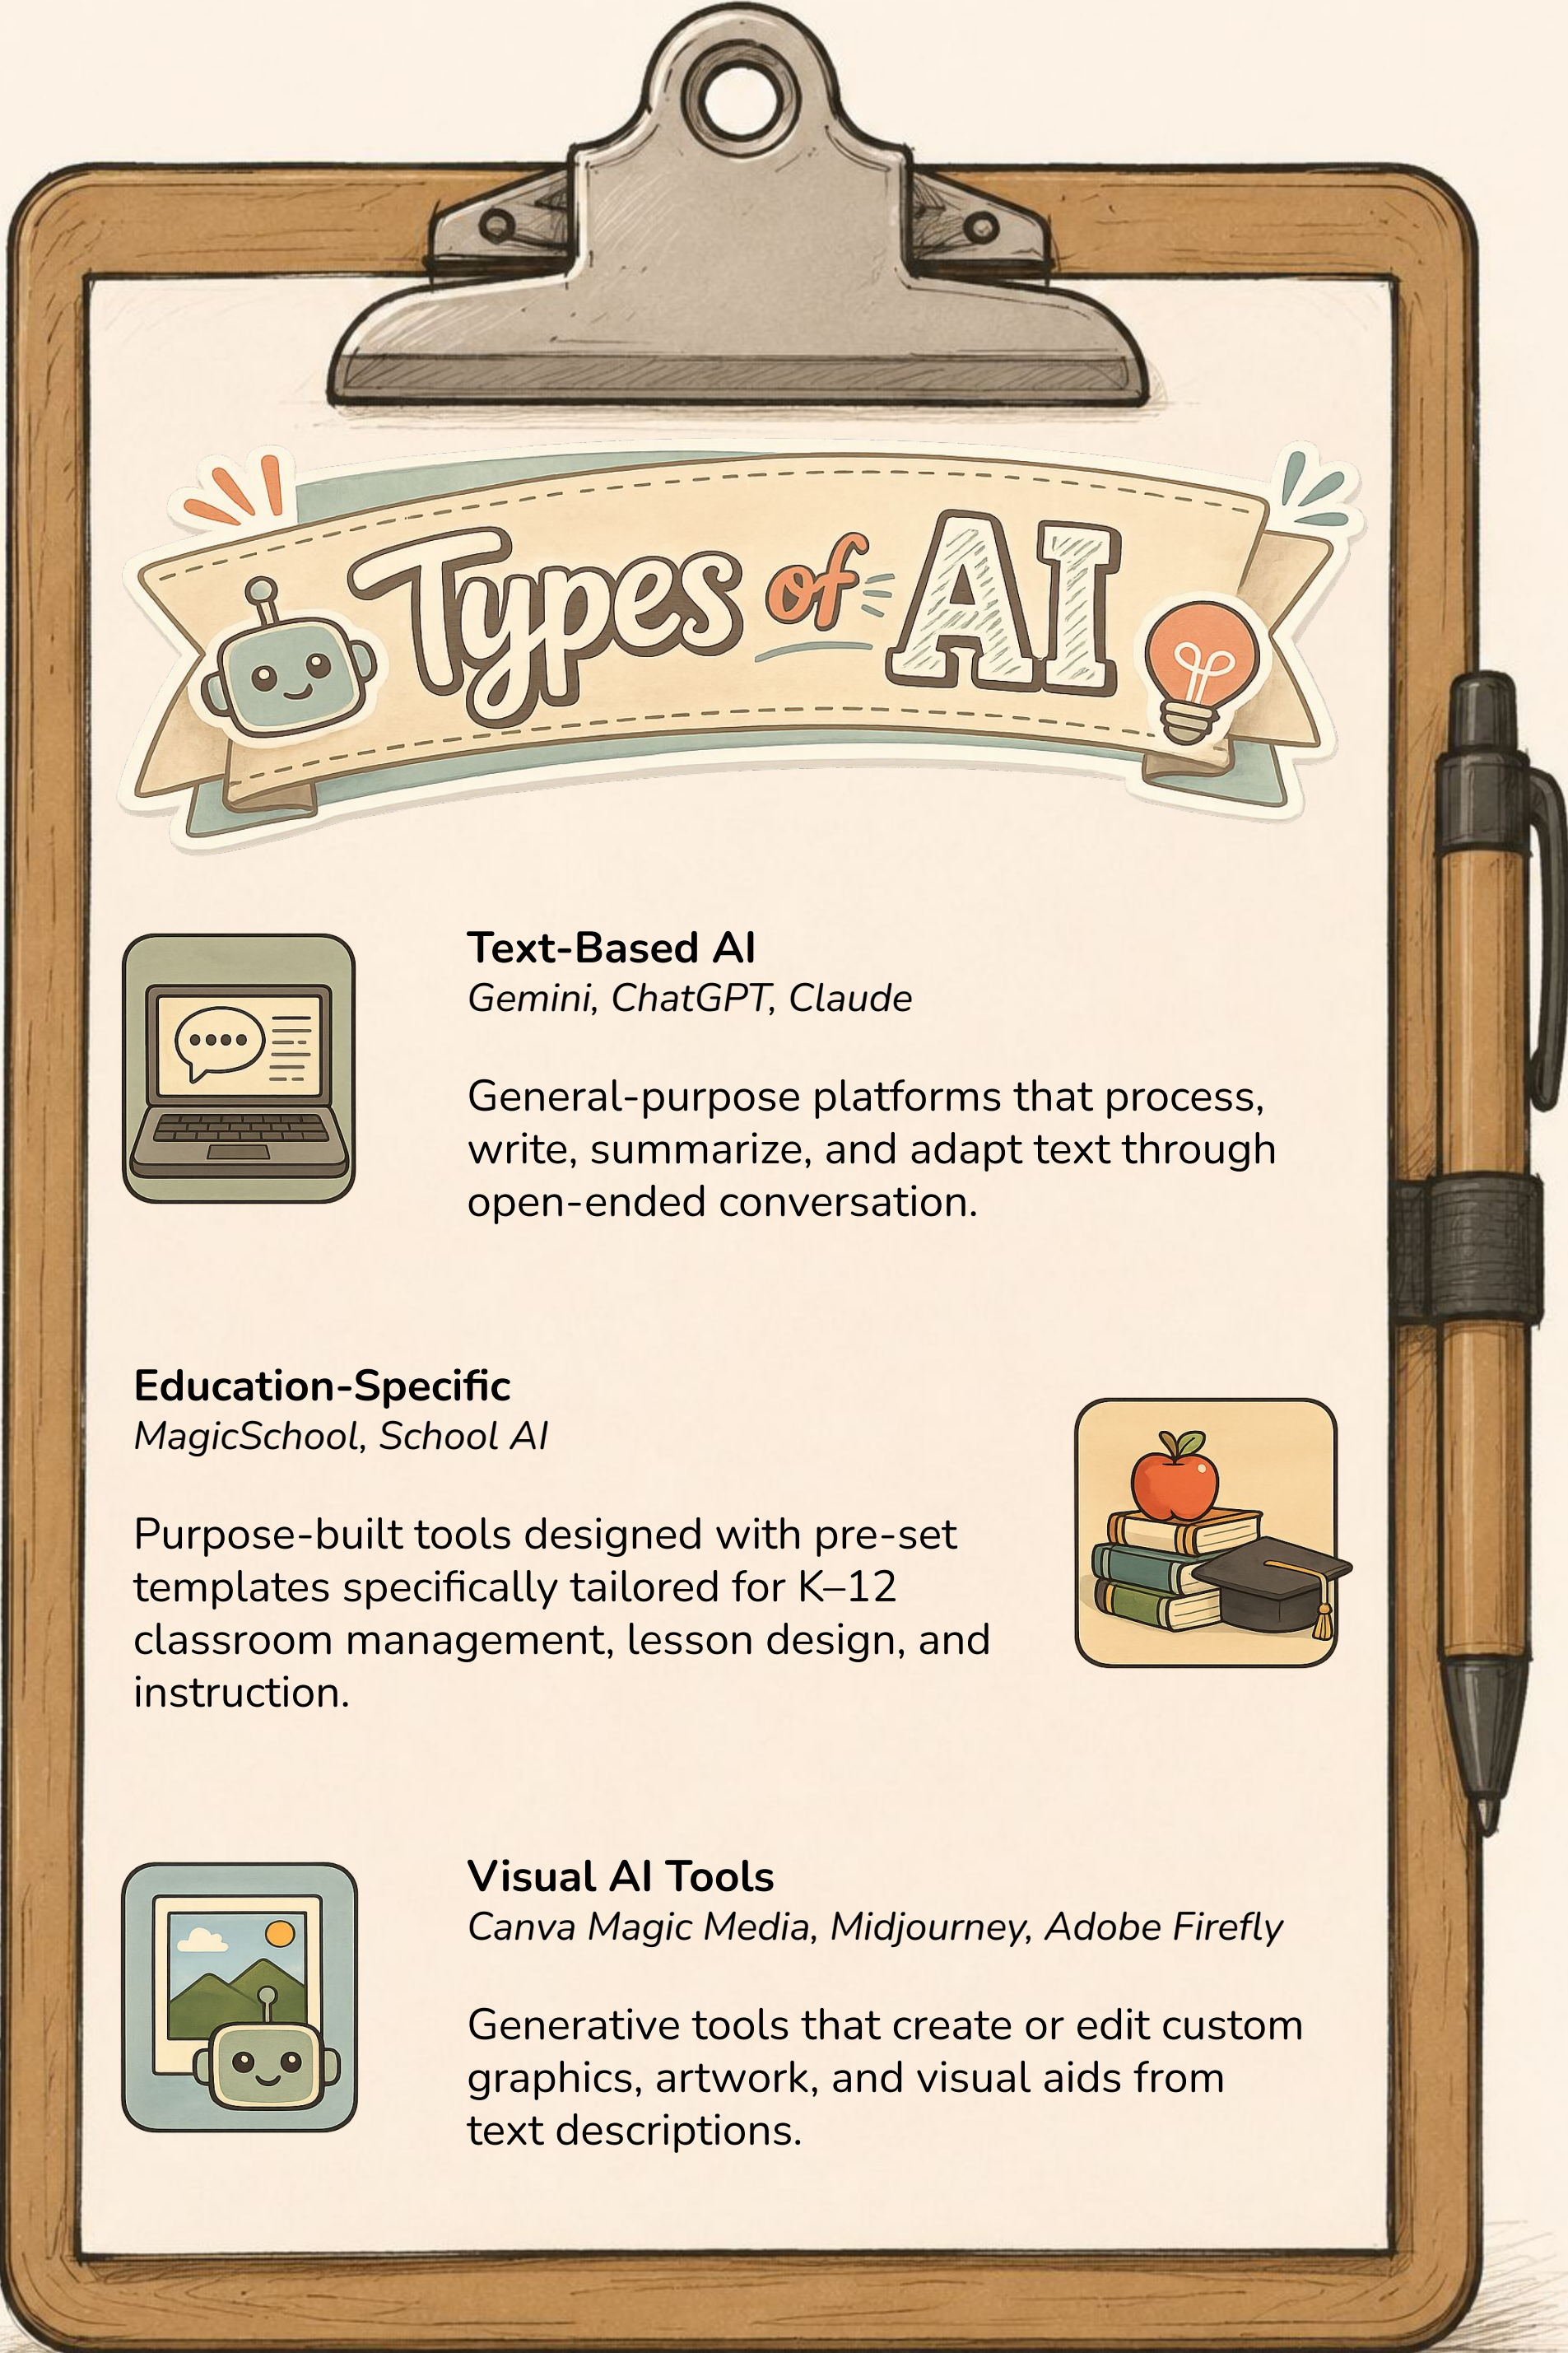

On the free version of ChatGPT, you can write, create, learn, solve problems, and brainstorm ideas. ChatGPT can analyze images, generate graphics, answer questions, and assist with everyday tasks.

Claude helps with lesson planning, differentiation, grading support, rubrics, and parent communication. Teachers gain access to Pro-level features, Claude Code and Cowork, and standards-aligned lesson planning through a Learning Commons connector.

Gemini streamlines educator workflows by drafting lesson plans, rubrics, and emails across Google Docs and Gmail. It also generates Google Slides presentations, Forms quizzes, and Sheets data trackers.

Types of AI

Text-Based AI

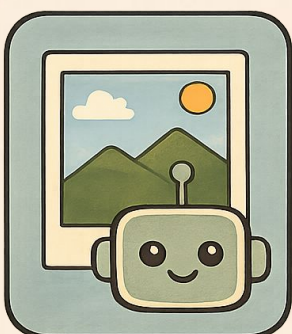

Gemini, ChatGPT, Claude

General-purpose platforms that process, write, summarize, and adapt text through open-ended conversation.

Education-Specific

MagicSchool, School AI

Purpose-built tools designed with pre-set templates specifically tailored for K–12 classroom management, lesson design, and instruction.

Visual AI Tools

Canva Magic Media, Midjourney, Adobe Firefly

Generative tools that create or edit custom graphics, artwork, and visual aids from text descriptions.
